Clementon, NJ 08021  
(856)-783-8833

## Tips for Planting Chrysanthemums:

- Try not to plant mums directly under a street light or other nightscape lighting, mums flower in the dark hours. This is why they do so well in the fall, they don't need as much sun.
- Mums planted in the ground tend not to need as much water as one left in containers.
- To avoid your mums wilting, check the soil every day to make sure it's moist!

## Valued Customer Check List:

- I have called to schedule my irrigation system winterization, 856-783-8833 x 16. **Our schedules are filling up!**
- I have sent back and scheduled my fall lawn renovation so my lawn can become healthy and beautiful again. **Time is running out!**
- I have scheduled to have my spring flowers taken out and mums put in by Quality Landscaping.
- I have looked into buying firewood from Quality Landscaping to prepare for the cool fall nights!

## A few more reminders for you.....

Weather permitting, mowing services will start to come to a close between the middle and end of the month. **If you have a preference of when you would like us to stop mowing, please do not hesitate to call.** If we do not hear from you, we will use our own judgment. When doing your fall clean-up, we will mow your lawn one final time so that it is low and even for the winter.

Fall clean-ups will start at the end of the month. However, it does depend on when the leaves start to fall. It's not too early to set up a date to have your fall clean-up done if you have a preference. Also, **if you still need a price for a clean-up, now is the time to call for the estimate.**

We have sent many reminders out about scheduling you irrigation winterization. **We stress the importance of this because our schedules fill up fast and this service needs to be done before the cold weather hits.** Once it starts to get cold at night you can run the risk of your pipes freezing and that can be very costly!
